

PRESS RELEASE

Production of 245 tons per day at the Dufferin Mine

Rimouski, August, 21 2014 – Ressources Appalachés (APP - TSXV and OU3 – FWB) is pleased to announce that the plant has almost reached its maximum output of 300 tons per day (t/d) with an average production of 245 t/d during the first two weeks of August with a minimum of 120 t/d to 352 t/d. Production has progressed gradually from 75 to 245 t/d in four months.

Mill Operations Report	May to June (2 months)	July (1 month)	August (14 days)
Ore Processed (ton)	4505	4078	3436
Daily Average (tons per day)	75	132	245

The ramp up period is almost completed. All plant components are working properly: grinding, gravity and flotation. Some elements remain to be optimized such as the automatic sampler and the filter press. To date, four dores were poured at the mine with final refining at Johnson Matthey (Ontario), sale of these ingots is underway. Results will be compiled and published subsequently when the mine reaches its normal production pace.

The fourth vein of the mine, located 120 m from the surface, is dewatered and ready to be exploited. Mechanical problems associated with extraction equipment caused delays, however, the Company maintains its objective to reach full capacity shortly at 300 t/d. Access to four veins will allow the stabilization of production revenues by combining areas of high and low levels.

About Ressources Appalachés

Since it was created in 1994, the goal of Ressources Appalachés has been to discover and develop deposits of base and precious metals in Canada with an expertise targeted towards the Appalachian geological formation in Québec and Nova Scotia. The Company is mainly focused on the exploration and development of the Dufferin Gold Mine in Nova Scotia.

Photos of the Dufferin Mine and its facilities are available on the Company’s website at: www.ressourcesappalaches.com.
